Month in Cash: A little closer to normalcy

January 1, 2014

After five years of historically low cash rates, relief appears to be on this year's horizon. OK, we know you've been promised rate-relief before, only to see it evaporate. But there's good reason to believe it will bear out this time around. Economic growth clearly has picked up in the U.S. and elsewhere, including Japan and the eurozone. A two-year budget deal struck between House Republicans and Senate Democrats has lessened the possibility of more policy shock out of Washington. And perhaps most important, the Federal Reserve has begun to let off the gas. Add this altogether, and the result is a macroeconomic and geopolitical environment that argues for a move toward normalcy in the money markets, i.e., a steepening cash-yield curve.

The speed and magnitude of this shift remains very much in question, to be sure. This month's initiation of tapering by the Fed is very modest, dropping the \$85 billion in monthly asset purchases known as quantitative easing (QE) to just \$75 billion. The post-December Federal Open Market Committee (FOMC) meeting statement and comments from Ben Bernanke in his subsequent press conference—his last as Fed chair—further reinforced the notion the target funds rate will remain effectively anchored at 0% well beyond the time when the unemployment rate drops below the 6.5% threshold, which could be breached as early as summer. In other words, any move up in short rates is going to be measured. But it seems to us that the takeaway from the December meeting is the bias on rates will be upward in 2014.

While December's unveiling of tapering plans was a bit of a surprise—it's possible Bernanke wanted to act so incoming successor Janet Yellen could start with a clean slate, i.e., this burden of when and how much to taper wouldn't be hanging over her head—we were encouraged the FOMC chose to split the \$10 billion cut equally between Treasury and agency mortgage securities. It signaled the Fed is focused on the broader bond market and not just Treasuries, which generally are more volatile, prone to swings up and down on the on-again, off-again flight-to-quality trade whenever crises erupt. As long as the economic situation continues to improve without any major external shocks, we think the Fed is likely to bump up the pace of tapering as the year progresses. Even if it doesn't, it will be done with QE by 2015.

Moreover, from a money market perspective, the Fed's decision to extend and expand the overnight reverse repo facility that is being tested to manage its exit from all the

Definition of Weighted Average Maturity (1) & (2)

*(1) "WAM Days" is the mean average of the periods of time remaining until the securities held in TexPool (a) are scheduled to be repaid, (b) would be repaid upon a demand by TexPool, or (c) are scheduled to have their interest rate readjusted to reflect current market rates. Securities with adjustable rates payable upon demand are treated as maturing on the earlier of the two dates set forth in (b) and (c) if their scheduled maturity is 397 days or less; and the later of the two dates set forth in (b) and (c) if their scheduled maturity is more than 397 days. The mean is weighted based on the percentage of the amortized cost of the portfolio invested in each period.

*(2) "WAM Days" is calculated in the same manner as the described in footnote 1, but is based solely on the periods of time remaining until the securities held in TexPool (a) are scheduled to be repaid or (b) would be repaid upon a demand by TexPool, without reference to when interest rates of securities within TexPool are scheduled to be readjusted.

Definition of Average Monthly Yield (3)

*(3) This current yield for TexPool Prime for each date may reflect a waiver of some portion or all of each of the management fees.
